A new shape of conference system to come.
With the sound of Yamaha.

Easy on the listeners. Easy on the talkers.

Easy on the listeners. Easy on the talkers. It is Yamaha's definition on what a high-performance conference system should be. Yamaha Projectphone embodies the new shape of conference systems to come with the sound of Yamaha. And it's all part of Yamaha's tradition of superb quality sound.

* Used in combination with the PJP-VC1(B) Codec Box for IP Video Conferencing

Problems with conventional conference systems

The Projectphone solution

01- Talker's voice not picked up clearly.

High performance audio pickup (arrayed microphones)

Arrayed microphones pick up conference participant voices reliably. The Projectphone picks up the typical exchanges that occur during meetings so accurately and smoothly that conference participants hardly notice its presence. Also, the arrayed microphones sense the delay when receiving sound to automatically detect the location of its source. By varying the pickup range, the Projectphone minimizes ambient noise to provide a clear conference experience.

* Supporting products: PJP-100H, -50R, -100UH, -50USB, -300V

02- Can't hear the person on the other end

Advanced sound reproduction (Sound acoustic design)

The Projectphone controls arrayed speakers to produce a point audio source, and features an acoustic design that accounts for the orientation of conference desks and chairs. It enables listenable audio output using a horn loading effect created by a synthesized acoustic wavefront.

* Supporting products: PJP-100H, -50R, -100UH, -50USB

03- Echo and audio cut-out makes it hard to hear

Elimination of audio cut-out and echo (adaptive echo canceller)

Echo can occur in an audio conference system when the microphones pick up the audio reproduced from the speakers. To counter this, the Projectphone incorporates a high-performance adaptive echo canceller that eliminates any of its own sounds that it may pick up. Combining this furthermore with a design that minimizes feedback of reproduced sound, it offers smooth full-duplex performance that is easy on both the listeners and talkers.

Using Yamaha Projectphone Conference Systems

Type 01 Audio (IP) [page 04](#)

Easily set up a high sound quality voice conference over with VPN or corporate LAN.

Simply by connecting the Projectphone to your corporate LAN, you can easily open a high sound quality voice conference with remote locations.

Relevant products

- IP Audio Conference System PJP-50R [page 08](#)

Type 02 PC [page 12](#)

Microphone Speaker Ideal for Web Conferencing

The communication functions of PCs can be used for Web conferences* and softphones** between remote locations to not only share images and audio, but also data and applications. Incorporating the Projectphone with its built-in high performance echo canceller as a microphone speaker enables you to utilize Web conferences/softphones more effectively.

- * A Web conference system exchanges visual images and sound between locations by using communication features on the PC, and is a collective term for a remote conferencing system that enables you to share data and applications on PC. For simplicity, any conferencing systems or services using the communication features of the PC in this catalog are classified as Web Conference systems.
- ** A collective term for internet telephony via PC, making calls over the Internet on a PC.

IP Audio Conference System

The PJP-100H and PJP-50R are audio conference systems featuring Yamaha's IP communication technology, designed to ease the remote audio conferencing experience for both talkers and listeners.

How to use

Audio conference between remote locations can be started immediately by connecting to an existing corporate LAN,* and allocating an IP address to the PJP-100H/PJP-50R. Simply by entering the IP address of the party you wish to reach, you can experience the high-fidelity audio conferencing with ease, just like a telephone call.

*An established network, having open 5060 (UDP) ports for SIP and 57000 to 57010 (UDP) ports for RTP/RTCP.

Applications and benefits of the IP audio conference system.

For multi-location corporate communications.

The PJP-100H/PJP-50R are audio conference systems with built-in IP communication features. There is no call/communication charge when utilizing a existing corporate LAN.

Easy multipoint connections.

The PJP-100H/PJP-50Rs multipoint connection function supports simultaneous connections of up to 8 locations. With the PJP-MC24 multipoint audio control unit, you can connect up to 24 locations simultaneously by using an existing corporate LAN. Unlike an expensive multipoint telephone service, this can be done free of charge since it uses a IP connection.

Start a conference instantly.

Video conferencing systems tend to require a designated room along with complicated settings. But with their integrated microphone speakers, the PJP-100H/PJP-50R are portable and easy to set up, enabling remote conferencing anytime, anywhere.

PJP-100H

page 08

Connect up to 8 locations

The PJP-100H/PJP-50R supports audio conferences up to 8 locations without an MCU (multi-point control unit). The PJP-100H/PJP-50R support audio conferences up to 8 locations without an MCU. They are able to connect 4 locations with a mesh connection and 8 locations with a cascade connection.

A free PC software program for easy configuration of multi-location connections is available. See Tips on page 06 for details.

Mesh connection (Max. 4 locations)

Cascade connection (Max. 8 locations)

Linking with the PJP-MC24 multipoint audio control unit

The PJP-MC24 can further enhance the effectiveness of the PJP-100H and PJP-50R operations.

- Open simultaneous connections with up to 24 locations
- "Convener" function for summoning conferences from a Web browser
- Manage extensions and usage status with SIP server functions

page 10

Linking with IP-PBX and SIP servers

Linking SIP with the NEC SV7000

The PJP-100H/PJP50R can be used as extensions under IP-PBX by linking with NEC SV7000 (NEC's UNIVERGE SV7000 SIP telephony server).

- * The PJP-100H and PJP-50R are UNIVERGE certified products.
- * Please inquire about SIP-linking with a IP-PBX other than the NEC SV7000.

Use as an inside phone line

IP-PBX and SIP server can assign extension numbers to both PJP-100H and PJP-50R. You can call other conference participants by dialing the extension number instead of an IP address along with call business phones.

Audio conferencing with participants outside of the company

IP-PBX and SIP server connect with external lines to enable participants to join a conference through the telephone, without needing audio conferencing system terminals.

[SIP linked with the NEC SV7000]

[Use as an inside phone line]

[Audio conferencing with participants outside of company]

Notes on linking with UNIVERGE

- * When the PJP-100H/PJP-50R are linked with the SV7000, the multi-point connection function of the PJP-100H and PJP-50R are unavailable. An SV7000 VS-32 is required for multi-point connections.
- * The PJP-100H/PJP-50R's hold and forward functions cannot be used (holding and forwarding allowed from other terminals).
- * Calls using the IP call function cannot be made between a PJP-100H/PJP-50R that is linked with an SV7000 and one that is not.

PJP-100H(S)

PJP-100H Product Information Page:
<http://www.yamaha.co.jp/english/product/projectphone/products/100h/>

IP audio conference system with built-in communication features,
 able to connect to broadband and corporate LANs.

Made in Japan

External dimensions and names of parts

Main features

- Point 01 Realistic sensations that only an IP connection can offer
- Point 02 Adaptive echo canceller for use in any kind of room
- Point 03 Divide mode
- Point 04 Pickup modes for a variety of conference situations

PJP-100H capabilities

By assigning an IP address to the PJP-100H and connecting it to your corporate LAN, you can hold voice conferences with up to eight locations without an MCU (multi-point control unit). Multipoint audio conferences can be held easily by entering a destination IP address and opening a call connection.

To call another party

Functions

Microphones 32	Speakers 12	Mesh connections Max. 4	Cascade connections Max. 8	Max. volume 85dB
Pickup range Rec. 2 m Max. 5 m	* Varies depending on communication methods and environment.			
Adaptive echo canceller	Noise reduction	SIP compliant	Zone pickup	Spot pickup
Divide mode	Supports RoHS	Firmware rev. upgrading		

Applications

Pickup range image

* Varies depending on communication methods and environment.

Point 01

Realistic sensations that only an IP connection can offer

PJP-100H offers 7 kHz of voice bandwidth, or approximately twice that of analog phone lines (3.4 kHz). Because the PJP covers almost all frequencies of the human voice, it creates a realistic conferencing experience where you know who is talking simply by their voice.

* Supporting products: PJP-100H, PJP-50R

Point 02

Adaptive echo canceller for use in any kind of rooms

Projectphone's adaptive echo canceller studies the operating environment and automatically adjusts the echo-filter factor accordingly. And since it performs well in many different acoustic conditions, you can easily hold conferences in whichever room or space available.

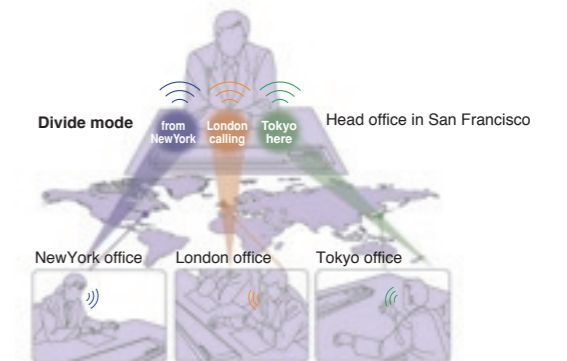

Point 03

Divide mode

Easily distinguishable voices without crossing, even during multi-location conferences

Voices can be reproduced from different speakers according to the locations of the talkers. Outputs without crossing not only make voices easily audible, but also enable easy identification of the location of the current talker.

* Only available when connecting a PJP-100H/PJP-50R with a mesh connection (IP).

Point 04

Pickup modes for a variety of conference situations

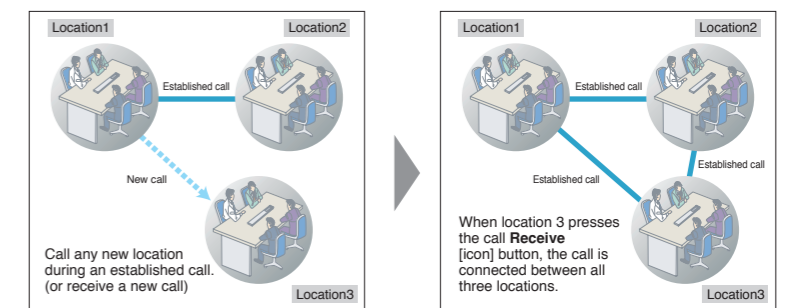

Arrayed microphones can identify the location of the sound and adjust the pickup range. Even in noisy environments (such as open spaces and rooms with projectors), they can isolate the talker's voice and clearly transmit it to the listening party.

* Supporting products: PJP-100H, PJP-100UH, PJP-50R

Topics | Calling between multiple locations

The PJP-100H enables simultaneous calls with up to 8 locations, and if necessary, allows you to call a new location during an existing call. To open a call between multiple locations, simply call the first location, then call the next location after the first call has been established.

PJP-50R(S)

PJP-50R Product Information Page:
<http://www.yamaha.co.jp/english/product/projectphone/products/50r/>

LAN port, LINE port, and AUDIO IN/OUT terminals provide a voice conference system that is suitable for a variety of uses.

Made in Japan

External dimensions and names of parts

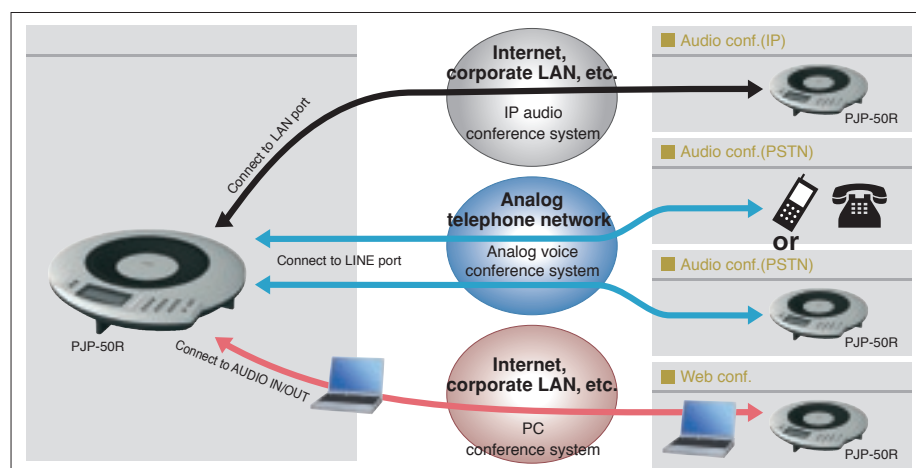

Main features

- Point 01** A wide selection of terminals support many types of conferences
- Point 02** Integrated audio mixer enables conferencing with mixed line types
- Point 03** Talker position reproduction makes even multiperson conferences easy to follow

PJP-50R capabilities

The PJP-50R offers broad line type support with LAN, LINE, and AUDIO (IN/OUT) ports.

Functions

Microphones 16	Speakers 4	Mesh connections Max. 4	Cascade connections Max. 8	Max. volume 85dB
Pickup rng. Rec. 2 m Max. 5 m	* Varies depending on communication methods and environment.			
Adaptive echo canceller	Noise reduction	SIP compliant	Zone pickup	Spot pickup
Microphone auto tracking	Talker position reproduction mode	Divide mode	Supports RoHS	Firmware rev. upgrading

Applications

Interfaces

Pickup range image

Cascade Connection Example

You can expand the pickup range by daisy-chaining PJP-50R's with audio cables. PJP-50R can also be linked up with the PJP-100H/PJP-100UH for use by a large number of people, and in various other circumstances.

*IP, PSTN only

Point 01

A selection of terminals support many types of conferences

PJP-50R has three built-in terminals. The LAN port provides high sound quality conferencing between Projectphones. The LINE port (for analog phone lines) facilitates calls with land line phones, cell phones, and analog phone terminals. And to connect to a PC as a microphone speaker for Web conferencing or "soft phone" use, you can use the AUDIO (IN/OUT) port. PJP-50R offers a multiinterface voice conference system that can be used in various ways according to the application.

Multifunctional, high-fidelity IP connection
 (Connect to LAN port)

Connects with land line and mobile phones
 (Connect to LINE port)

Connects to a PC with an audio cable
 (Connect to AUDIO IN/OUT port)

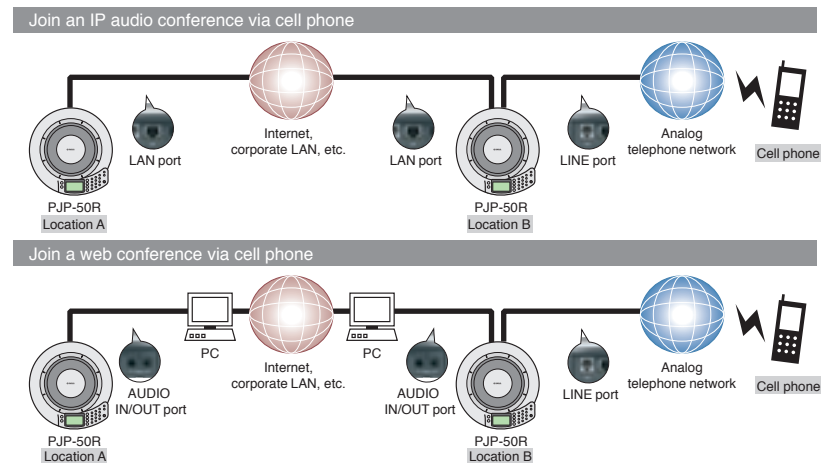

Point 02

Integrated audio mixer enables conferencing with mixed line types

With its various connectors, PJP-50R can open calls with simultaneous IP, analog phone, and audio connections. Parties away from the office can join IP audio conferences from their cell phones, or join Web conferences from a telephone (voice only).

* Participant can talk with location A by cell phone through PJP-50R at location B

Point 03

Talker position reproduction makes even multiperson conferences "easy on the listeners"

Microphone array's talker detection function and the speaker array's virtual sound source generation function combine to facilitate the "talker position reproduction mode", which modifies audio output according to the seating arrangement of the callers. Sound is output to different positions making it easy to distinguish between multiple voices (up to three talkers per location over a two-location IP conference).

Topics | Easy setup from a Web browser

The PJP-100H/PJP-50R lets you enter settings either directly on the unit, or via a Web browser. Just enter the IP address of the PJP-100H/PJP-50R in the Web browser to call up the settings screen. Whether configuring audio, SIP, or other communications, you can enter all settings right on the screen. The ability to view and edit settings remotely means it is easy to manage your equipment even in locations where no systems administrator is present.

Hold audio conferences easily with this SIP Network server designed for Projectphones.

Made in Japan

PJP-MC24 capabilities

The PJP-MC24 is a SIP server designed exclusively for IP audio conferences, allowing simultaneous connections and talking between up to 24 PJP-100Hs and PJP-50Rs.

24-Location Conference

- Using the PJP-MC24 audio mixing functions, you can hold one conference between up to 24 locations.
- By connecting multiple PJP-MC24s to each other, you can hold conferences between up to 48, 72, or 96 locations (with two, three, or four PJP-MC24s connected to each other).

- SIP call management
- Conference room utilization
- Audio Mixing

- SIP call management
- SIP call management
- Conference room utilization

10-Location Conference

Conference 1 Conference 2 Conference 30

- You can use the PJP network functions to hold conferences with 2 to 10 locations. The maximum number of conferences that can be held simultaneously is 30.

Call Between Individual PJPs

2-Location Conference 3-Location Conference 4-Location Conference

- Calls can be made directly between individual PJPs. The PJP-MC24 only manages SIP calling.

- Because the PJP-MC24 can only manage up to 200 calls, the number of PJP's that can be connected is limited to the number whose maximum number of calls is 200.
- The maximum number of simultaneous conferences is 31 (one 24-location conference plus thirty 10-location conferences).

Point 01

Open simultaneous connections with up to 24 locations

The PJP-MC24 is an audio conference MCU (multi-point control unit) that allows up to 24 PJP-100H/PJP-50R IP audio conference systems to connect and talk simultaneously. You can also connect up to four PJP-MC24s to each other, allowing audio conferences with up to 96 participating locations.

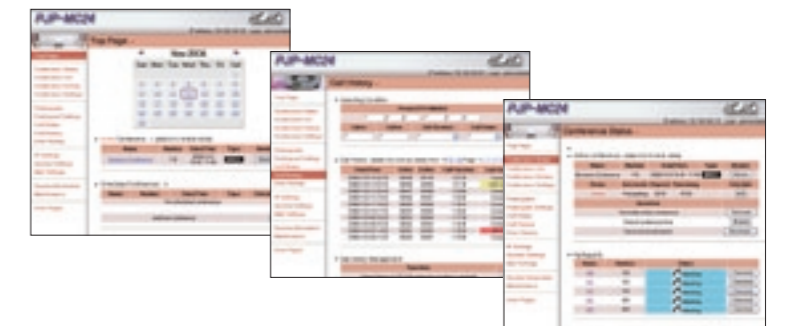

Point 02

Manage conferences and terminals easily from a Web browser

From a Web browser, you can hold, start, and end conferences easily by using the PJP-MC24 conference reservation and convener functions. You can also manage network communications, terminals, and conferences, and view conference history and error logs.

Web browser

Point 03

Manage terminals and terminal usage status with SIP server functions

The PJP-MC24 has SIP server functions that allow it to assign extension numbers to up to 500 PJPs. As long as all of the PJPs are part of the same network, the PJP-MC24 can manage them by their SIP extension numbers, even in a DHCP environment. Also, you can output information such as location, call history, and statistics in a CSV format file, allowing you to monitor and analyze the usage of installed PJP-100Hs and PJP-50Rs.

Topics | How to hold conference without PC

■ Ad Hoc

You can hold a conference between 2 to 10 locations quickly and easily without using a PC by setting a conference number that terminals dial in order to participate in the conference.

■ Between Individual PJPs

PJPs can call each other directly by dialing each other's SIP extension numbers. Two to four PJPs can connect to each other in a direct call. This feature is convenient for daily conversations between locations.

Conference Microphone Speaker

Ideal for Web Conferencing with VoIP

The PJP-100UH, PJP-50USB, and PJP-25UR are conference microphone speakers featuring Yamaha technology, designed to ease the conferencing experience for both listeners and talkers.

How to use

The Projectphone support Windows standard drivers. They can be used immediately as microphone speakers by connecting them to any PC with a USB cable. Using the Projectphone for Web conferencing* or with a softphone** allows smooth multiperson response without headsets.

▲ Add to an existing Web conference system to enable multipoint, multiperson conferencing.

* A Web conference system exchanges visual images and sound between locations by using communication features on the PC, and is a collective term for a remote conferencing system that enables you to share data and applications on PC. For simplicity, any conferencing systems or services using the communication features of the PC in this catalog are classified as Web Conference systems.

** A collective term for internet telephony via PC, making calls over the Internet on a PC.

Benefits of integrating the Projectphone with Web Conferencing

Combining the Projectphone with Web conferencing is one of the most effective audio solutions for remote conference systems. Using the Projectphone with its built-in high performance echo canceller as a Web conference microphone speaker enables you to use Web conferences more effectively.

Smooth conversations without echo and audio cut-out

The PJP enables multiple persons to join a Web conference or a conversation via softphone. High audio pick-up and fidelity allow conference participants to speak to one another as if they are in the same room, thus maintaining full-duplex performance.

Turns a Web Conference into a video conference

By combining PJPs with a large-screen display and a camera, you can use your Web conferencing system for video conferencing. The Projectphone provides a conferencing experience that is easy on both listeners and talkers, and comparable in performance to a dedicated video conferencing unit.

Provides PC communication the freedom of no headsets

Using a headset for remote conferencing puts a direct strain on the ears and can make you tired after extended use. The Projectphone allows you to speak as naturally as you would during in-person conferences, thus improving productivity without adding stress.

If you've ever felt awkward speaking to the person next to you through a headset...

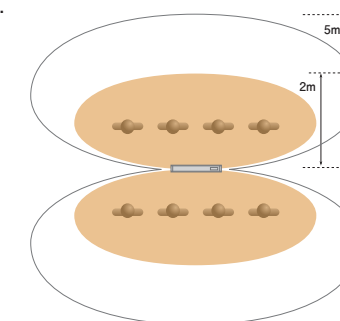

The PJP-25R picks up conversations between adjacent persons. And because you can speak naturally, you will not get tired during long meetings.

PJP-100UH

The PJP-100UH is a conference microphone speaker that is suitable for a large group of people.

Lets multiple participants join PC conferences with PC VoIP.

Made in Japan

External dimensions and names of parts

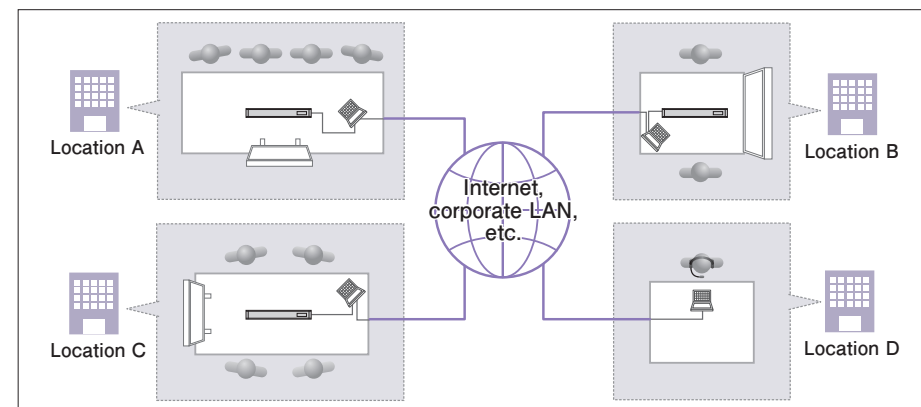

Main features

- Point 01 Easy to connect, Easy to use
- Point 02 Design based on acoustic engineering
- Point 03 Supports daisy chaining for conferences of 10 or more persons

PJP-100UH capabilities

PJP-100UH is a conference microphone speaker with a built-in high performance echo canceller. When connected to a PC with a USB cable, PJP-100UH enhances your soft phone or Web conferencing system with smooth, full-duplex capability.

Functions

Microphones 32	Speakers 12	Max. volume 85dB	Pickup mg* Rec 2 m Max 5 m
Adaptive echo canceller	Noise reduction	USB (Plug&Play)	Zone pickup
Microphone auto tracking	Supports RoHS	Firmware rev. upgrading	Spot pickup

* Varies depending on communication methods and environment.

Applications

PC (microphone speaker)

Interfaces

USB port AUDIO IN/OUT

Pickup range image

Point 01

Easy to connect, Easy to use

The PJP-100UH is a conference microphone speaker with a built-in high performance echo canceller. When connected to a PC with a USB or audio cable, the PJP-100UH enhances your softphone* or Web conferencing system for multiperson response that is as smooth as video conferencing.

* Software for making telephone calls over the Internet on a PC.

* Supporting products: PJP-100UH, -50USB, -25UR

Point 02

Design based on acoustic engineering

The PJP has been structurally designed based on acoustic engineering principles to achieve conferences that are easy on both listeners and talkers. The left-to-right microphone array is optimal for pick up and echo cancelling. The undermounted speakers are acoustically designed so that sound reflected off the tabletop reaches the ears.

* Supporting products: PJP-100H, -50R, -100UH, -50USB

Point 03

Supports daisy chaining for conferences of 10 or more persons

Whether you want to set up in a large conference room or join a multiperson conference, connecting PJP-100UH with an audio cable lets you expand the pick up range. You can even hold conferences with dozens of people, because up to four units can be daisy chained.

* Connecting extra units introduces additional noise and can lower the sound quality.

** PJP-100UH can also be connected to PJP-50R and PJP-100H.

Topics | Pickup range

Because the pickup range is affected by the volume and manner of speaking, room acoustics, communication methods, and other factors, the recommended pickup range varies depending on operating conditions.

• Volume and manner of speaking

The "volume" is that of the voice when it reaches the microphone—a person far from the microphone who is speaking loudly, clearly, and directly toward it has the same effective volume as someone close to it.

• Room acoustics

In rooms with high reverberation, sound reflected off walls and ceilings affects the pickup. When reverberation is high, echo can occur more easily on the listener side, but at the same time it offers the advantage that speakers far from the microphones can be picked up more easily.

• Communication method

In remote conferences, "Pickup" is said to first occur when picked up sound reaches the listener. Even after pickup by the Projectphone, the pickup range is still dependent on the audio bandwidth of the network and communication software.

* People farther away speak more loudly and clearly.

PJP-50USB(W)

PJP-50USB Product Information Page:
<http://www.yamaha.co.jp/english/product/projectphone/products/50usb/>

Room-Based Web Conferencing Device with High Voice Quality.

Made in Japan

Applications

PC (microphone speaker)

Interfaces

USB port AUDIO IN/OUT

Pickup range image

Lineup (Silver)

Conference Microphone Speaker
PJP-50USB(S)

U.S. only

Point 01

Combines wide pickup range with clear audio

The newly improved microphone tracking function yields both a wide pickup range and clear audio. Expanding the pickup range can mean lower sound quality because ambient noises can be picked up in addition to the talker's voice. But the PJP-50USB greatly reduces these noises by directing the arrayed microphones exclusively toward the talker. This improves the quality of picked up sound, making the talker's voice come through clearly without amplifying ambient noise. It gives you the best of both worlds—broad-ranging pickup and crystal clear audio.

Microphones track only the talker's voice without picking up the sound of the projector.

Point 02

Noise reduction eliminates fan noise

Built-in noise reduction eliminates noise even in rooms with constant sound such as from projectors and air conditioners. Initially noises are physically excluded through directional pickup by the arrayed microphones, and then any noises getting through are eliminated through noise reduction. The talkers' voices are transmitted purely and clearly.

Noise reduction image

Point 03

High sensitivity microphones

Eight of the PJP-50USB's high sensitivity microphones achieve equivalent or better audio pickup than twice the number of conventional mics. And with auto gain control, distant or quiet voices are picked up better than ever. At the same time, we also improved horizontal and vertical pickup performance by arranging placement of the arrayed microphones. Projector and ventilation noises are avoided because the pickup is resistant to sounds directed at the ceiling.

Installation example

Topics | Firmware upgrade requests

The latest Projectphone firmware is available free of charge. Upgrades reflect technological innovations and add improvements in sound quality and functionality to existing models. Be sure to check our Web site regularly for firmware upgrades.

Adaptive echo canceller	Noise reduction	Movable microphone arms	USB (Plug&Play)	USB bus-powered
PC applications	Supports RoHS	Firmware rev. upgrading		

Applications

PC (microphone speaker)

Interfaces

USB port AUDIO IN/OUT

Pickup range image

Point 01

Compact, lightweight, and easy to carry

PJP-25UR conceals itself neatly in a B5-size laptop bag, and weighs a mere 570 grams. Because it's easy to carry, you are free to join a Web conference in a variety of situations such as from any small space in the office or when out on a business trip.

Point 02

Movable microphone arms adapt to various seating arrangements

One of the features of the PJP-25UR is its movable microphone arms. By moving the microphone arms to change the pick up range, the conference participant voices are picked up even in locations with some degree of ambient noise such as small spaces in offices. By changing the angle of the microphone arms, the PJP-25UR adapts to the seating arrangement.

Point 03

USB bus powered —no power cord necessary

Since it runs on USB bus power, you can use it as a microphone speaker simply by connecting it to a PC with a USB cable. Connection is simple, offering incredible ease-of-use.

Topics | Software application enters detailed settings from a PC

Product CD-ROM comes with a software application that lets you enter detailed settings

If you enter the number of conference participants and seating arrangement in the settings window, it shows you the optimum PJP-25UR settings. Conference location settings can also be saved and loaded.

▲ Easy to enter detailed settings.

▲ Shows the optimum settings based on the number of people and seating arrangement.

Press the MENU button on PJP-25UR to start the PC application.

PJP-300V(B)

PJP-300V Product Information Page:
<http://www.yamaha.co.jp/english/product/projectphone/products/300v/>

An integrated camera + microphone speaker for video conference systems equipped with 16 arrayed microphones, 14 arrayed speakers, and 3 cameras.

- 1.3 million pixels ● Digital zoom, tilt, pan ● 4-way split screen

Made in Japan

External dimensions and names of parts

Main features

- Point 01 **Talker detection function instantly pans toward the talker**
- Point 02 **All in one component, no additional mic needed on the desk**
- Point 03 **Video conferencing with 4 locations simultaneously**

Functions

Microphones	Speakers	Cameras	Max. volume	Pickup range*
16	14	3	85dB	Rec 7m

*Varies depending on communication methods and environment.

Adaptive echo canceller | Noise reduction | Supports RoHS | Firmware rev. upgrading

Applications

Video (with PJP-VC1) | PC (camera & microphone speaker)

Interfaces

LAN port | AUDIO IN/OUT

OPTION

Stand for the PJP-300V **ST-300/ST-300UD**

Wall-mounting kit for the PJP-300V **BR-300/BR-300DS** page 23

Pickup range image

Codec Box for IP Video Conferencing PJP-VC1(B)

PJP-VC1 Product Information Page:
<http://www.yamaha.co.jp/english/product/projectphone/products/vc1/>

Adding on the IP video conference codec box creates a smooth video conference system.

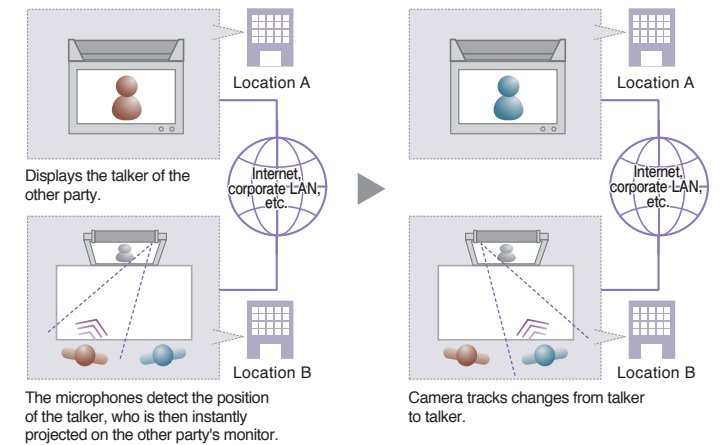

Capabilities of PJP-300V combined with PJP-VC1
 You can create a high sound quality video conference system by connecting PJP-300V with the PJP-VC1 dedicated IP video conference codec box.

Point 01

Talker detection function instantly pans toward the talker

Sixteen microphones arrayed on top of the main unit automatically tracks the talker and instantly points the three cameras to capture and project the talker's image. Conferences can proceed smoothly because it is not necessary to adjust cameras manually- the cameras change direction quickly to track the talker.

Point 02

All in one component, no additional mic needed on the desk

The sixteen arrayed microphones pick up voices reliably and at a uniform volume regardless of the seating arrangement in the conference room. An approximately seven-meter* (twenty-three-foot) voice pickup range is achieved just with the unit's built-in microphone array, eliminating the need for additional external mics. Now you can "spread out" on the conference room table-no more microphones and cables on the tabletop.

Point 03

Video conferencing with 4 locations simultaneously

PJP-300V can be combined with PJP-VC1 for simultaneous 4-location connections without an MCU (multi-point control unit). This simultaneous 4-location connection is made by setting up a single unit as the (master) unit (=enter multi-location connection settings) and mixing the audio and video on that unit.

Topics | Capabilities of PJP-300V when combined with a Web conference system

PJP-300V can be connected to existing Web conference systems for use as a camera + microphone speaker.

PJP-CAM1

PJP-CAM1 Product Information Page:
<http://www.yamaha.co.jp/english/product/projectphone/products/cam1/>

A single Web conference camera shoots people, documents, and objects with a fisheye lens.

Made in Japan

Main features

- Point 01** Two modes for shooting conference participants
- Point 02** Two modes suitable for shooting documents and objects
- Point 03** USB bus powered—no AC adapter needed

PJP-CAM1 capabilities

PJP-CAM1 runs only on USB bus power (no other power supply required). By simply connecting to a PC with a USB cable, you can use it as a Web conference camera. Connection is simple, offering incredible ease-of-use.

External dimensions and names of parts

Control screen
 You can operate the camera from the PC using the controller.

Point 01

Two modes for shooting conference participants

Point 02

Two modes suitable for shooting documents and objects

Options

For the PJP-300V

ST-300 Stand for the PJP-300V

▲ A dedicated stand for supporting the PJP-300V on a TV stand along with a flat-panel display.

ST-300UD Stand for the PJP-300V

▲ Dedicated stand for installing the PJP-300V on a desktop.

BR-300 Wall-mounting kit for the PJP-300V

▲ Dedicated hardware for wall-mounting the PJP-300V.

BR-300DS Mounting kit for the PJP-300V

▲ Dedicated hardware for attaching the PJP-300V to Yamaha video conferencing stands. This product is a mounting bracket for the HAYAMI video conference stand option PHP-82.

PS-AC1 AC adapter for the PJP-25UR

PS-AC1 is an AC adapter for the PJP-25UR.

- ▲ Way of use
- Connect to other devices through audio cable.
- When not enough volume is obtainable from USB bus power.

What are the advantages of Projectphone?

New systems with the sound of Yamaha transform office conferences. The Projectphone delivers results.

The Projectphone embodies the shape of conference systems to come with the sound of Yamaha. With the sound quality you expect from Yamaha technology plus unsurpassed ease-of-use, countless companies have chosen the Projectphone since its release in 2006. It has revolutionized conferencing in a variety of office settings. Take a look at some of the Projectphone's major success stories.

· Download the latest Projectphone success stories at the following URL.
<http://www.yamaha.co.jp/english/product/projectphone/introduction/>

Advantage 1 Improved business productivity

Enables easy, multiperson remote conferencing anytime, anywhere.

Adding the Projectphone to your workplace lets you easily hold conferences with remote locations anytime, anywhere. Moreover, it allows you have group meetings with multiple participants across multiple locations, instantly eliminating the inconvenience of fixed video conference rooms that require reservations and scheduling. Given the increased importance of work coordination when team members are spread across multiple locations, business productivity can be dramatically increased through real-time information sharing and communication.

Advantage 2 Increased effective working hours

Reduces business travel time, increasing the ratio of time spent on primary duties.

By setting up a remote conferencing system with the Projectphone, you can reduce time spent moving between business venues and increase effective working hours. Of course, remote conferencing cannot take the place of all appointments and meetings. But if details can be worked out in remote conferences before meeting in person, you can make meetings more productive and therefore less frequent. Also, business trips that used to involve a large number of people can be streamlined by sending one representative to the in-person meeting and having the principles appear remotely with the Projectphone only when necessary. This cuts down on the frequency of business trips, improves efficiency, and raises productivity.

Business trip with 3 people flying -> 1 person flying + 2 people attending via the PJP

Advantage 3 Cut costs

Reduced travel expenses, phone charges, and other personnel expenses.

Cutting back on travel expenses also significantly reduces related incidental costs. For example, an IP connection means no phone charges when you use your existing LAN lines. Unlike with video conference systems, there are no usage charges for dedicated lines or multipoint connection services, nor any need for expensive equipment.

8 trips per month is tough. Twice per month is better, and it saves CO2 on top of travel time.

Advantage 4 Reduced business trip CO2 emissions

Environmentally responsible companies are placing priority on reducing CO2 emissions.

The Projectphone lowers the frequency of business trips, and the amount of transportation-related CO2 that goes with them. Thus, the PJP not only increases business efficiency and cuts travel costs, it also makes a contribution to the environment.

Advantage 5 Effective for contingency planning and risk management

The Projectphone is an effective backup tool for your phone line and for remote conferencing when trouble occurs.

IP audio conference systems are even useful during accidents and disasters. They can be used as emergency backup phone systems, and allow you to easily hold urgent meetings between multiple remote locations when trouble occurs. They are also very useful tools from the standpoint of risk management, because they facilitate coordination with remote locations when employees are injured or sick and have difficulties moving between sites.

Glossary

	Adaptive echo canceller	Echo can occur in an audio conference system when the microphones pick up the audio reproduced from the speakers. To counter this, the Projectphone incorporates a high-performance adaptive echo canceller that eliminates any of its own sounds that it may pick up. Combining this with a design that minimizes feedback, it offers smooth full-duplex performance that is easy on both the talkers and listeners.
	Noise reduction	Built-in noise reduction eliminates noise even in rooms with constant sound such as from projectors and air conditioners. Noise is removed from the ambient sound picked up by the microphones. The listener hears only clear voices.
	Movable microphone arms	One of the features of the PJP-25UR is its movable microphone arms. By moving the microphone arms to adjust the pickup range, you can optimize pickup performance according to the seating arrangement.
	USB (Plug & Play)	No drivers, applications, or other software need be installed because Windows standard drivers are supported. The Projectphone can be used as a microphone speaker simply by connecting it to a PC with a USB cable. It includes audio terminals, and you can even use it for PCs in the company that are not equipped with USB ports.
	USB bus-powered	Since it runs on USB bus power, you can use the Projectphone as a microphone speaker simply by connecting it to a PC with a USB cable. Connection is simple, offering incredible ease-of-use.
	SIP compliant	Connections can be made to a variety of different SIP servers such as the PJP-MC24 audio mixer for multi-location connections, or NEC's SV7000 SIP telephony server.
	Zone pickup	Zone mode is recommended for quiet rooms because of its wide audio pickup range. Thanks to the high audio pickup performance of the arrayed microphones, voices are picked up accurately even when distant from the microphones. Because the pickup range can be adjusted, you can ensure that even noises such as from air conditioners and projectors are not picked up.
	Spot pickup	In this mode, the narrow directivity of the arrayed microphones allows you to pick up sound only from a specific direction. It is the optimal mode for conferences limited to one or two participants, or in noisy environments. Even in open spaces or when surrounded by noise, only the unadulterated voices of the talkers are heard by the other party.
	Microphone auto tracking	A microphone beam position detection function automatically tracks in the direction of the talker. Only the unadulterated voice of the talker is picked up. Because pickup is directed toward the talker, this mode is useful for multiperson conferences where noise sources are present.
	Divide mode	The voices can be reproduced from different speakers according to the locations of the talkers. Outputs without crossing not only make voices easily audible, but also enable easy identification of the location of the current talker.
	Talker position reproduction mode	The microphone array's talker detection function and the speaker array's virtual sound source generation function combine to facilitate the "talker position reproduction mode" that modifies audio output according to the seating arrangement of the callers. Sound is output at different positions making it easy to distinguish between multiple voices (up to three talkers per location over a two-location IP conference).
	PC applications	The PC applications include various adjustment functions and setup wizards that enable entry of detailed settings. We also recommend installing PC applications in order to upgrade the firmware and ensure that you always have the latest functions.
	Supports RoHS	The RoHS directive ("the restriction of the use of hazardous substances") refers to the Toxic Substances Control Act implemented in the European Union (EU). Since its implementation on July 1, 2006, six designated substances (lead, mercury, cadmium, hexavalent chromium, PBB (polybrominated biphenyls), and PBDE (polybrominated diphenyl ethers)) have been banned from electric/electronic products handled in the EU region.
	Firmware revision upgrading	Firmware with the latest functions is offered free of charge. It can be downloaded onto a unit either from that unit or by using the PC application, and we encourage all customers to do so.
